

# Updating your ZENEC navigation software

To run any kind of nav-engine or map updates you have to download and use a special software, called "Toolbox". First of all, the software makes your ZENEC navigation software compatible to content available on [www.zenec.naviextras.com](http://www.zenec.naviextras.com), and on the other hand, it is most convenient to deploy and handle new updates, maps and other add-ons.

You can download the toolbox software by following this link:

<https://zenec.naviextras.com/shop/portal/downloads>

## Key features and Functions of the Toolbox

### ■ Keep your navigation software Up-to-Date

When you have connected an SD/SDHC card to your computer with the Toolbox running, it will detect the individual software content on the card automatically. I.e. if there is a new update available, Toolbox will show it automatically.

### ■ "Get maps and more"

When you have connected the ZENEC SD/SDHC card to your computer and Toolbox has been started up, it will detect your software automatically. If you proceed to press the button "Get maps and more", Toolbox will establish connection with a special download server. After a short time, which depends on internet ADSL bandwidth, Toolbox will display all content bundles and add-on features which are compatible with your particular ZENEC navigation software. You can enter different search criteria like POI packets, maps and 3D contents for example. Once you have chosen the content you are interested in, you can find it in "My Updates"

### ■ Easy updating with "My Updates"

After having chosen update bundles / features / maps from the "maps and more" menu, you can download your selection over "My updates".

To run such an update on your ZENEC navigation system, you just have to follow the instructions of the installation guide precisely.

### ■ "Backup and Restore"

This feature provides for simple backup or restore process of your ZENEC navigation system in case of mistakes, crashes etc. Besides this, Toolbox will always ask you for creating a backup while you are installing new content or updates.

### ■ "Transfer my contents"

If there is not enough space on your SD/SDHC card to add new content, you can easily transfer existing content you do not need to your computer. This content can be used anytime later, in case you change your mind.

# Updating your ZENEC navigation software

## ■ "Settings"

With "Settings" you can set different program languages and different functions of Toolbox.

### **Please also note:**

- You need internet access of ADSL type to use the Toolbox software the way it was designed.
- To use Toolbox, you have sign up, creating a user account for log-in. A corresponding log-in box will appear after the installation of the Toolbox.
- It is essential that your unit is mentioned on the compatibility list to be found on [www.zenec.naviextras.com](http://www.zenec.naviextras.com) and that you own a valid software license.
- To use Toolbox, you have to connect a SD/SDHC card that contains ZENEC navigation software to your computer. Normally the toolbox will detect the navigation software automatically, if not, please contact [support@zenec.com](mailto:support@zenec.com)
- It is necessary that you have used the ZENEC navigation system at least once, before using the Toolbox software. Otherwise Toolbox can not run correctly.
