EMOTIVE MONICEIVERS

E > GO
EXCHANGE AND GO

E>GO Naviceiver – 100% perfect fitting

E>GO is the revolutionary concept from ZENEC, the leading specialist in car multimedia. Exchange and GO – in short, E>GO – stands for a new highly innovative generation of naviceivers and moniceivers that are designed to fit perfectly to the original looks of various vehicle types.

The flagship and starting point of the new model line is the moniceiver ZE-MC2000, the design of which fits perfectly with the interior of the VW GOLF V platform, from the color of the instrument panel through to the red/blue day and night illumination and the elegant front panel design.

ZENEC's new A/V control unit has been perfectly harmonized optically with all vehicle models that correspond to the GOLF V platform – the VW Golf V, Jetta, EOS, Passat, Caddy, Tiguan, Touran or even the new Scirocco 2008 – as well

as with marginal modifications – with the SEAT models Altea, Leon and Toledo (new mounting bezels required).

In addition, E>GO is tailored perfectly to the target vehicle with its dedicated and specially developed mounting characteristics: ZE-MC2000 can be integrated without major installation works and without any additional adapters into the original factory installation cut-outs of all cars based on the GOLF V platform: simply remove the original radio, install E>GO and you're ready to drive. The use of the factory installed steering wheel remote control is just as easy: simply connect your E>GO moniceiver to the original radio harness of your car – and thanks to the integrated Stalk/CAN-bus interface, the functions of all optional factory mounted components are retained in their entirety. ZENEC E>GO – brilliantly simple, optically perfect.

Features

GENERAL INFORMATION	ZE-MC2000
iPod direct connection	•
Bluetooth/A2DP	•/•
USB	•
SD card reader	•
Dual zone	•
Theft protection (code)	•
Connection to steering wheel RC	•

SEAT LEON*	as of 09/2005
SEAT TOLEDO*	as of 12/2004

* Additional bezel and adjustment required.

E>GO – Navigation ZE-NA2000

The navigation box ZE-NA2000 is available as an optional component for the ZE-MC2000. When connected to the ZE-MC2000, the driver can navigate throughout Western and Eastern Europe with all features and functions conveniently controlled via touch screen, i.e. the ZE-NA2000 will guide you to any destination chosen in 43 countries. Detailed and up-to-date maps with precise voice guidance support (24 different languages) as well as simple to use UI (in 29 different languages) enable an unmistakable and impressive navigation experience. Thanks to the 400 MHz processor (with dedicated 64 MB SD RAM) and the optimized navigation engine software iGO8, the navigation, build-up of the

map views as well as the route calculation happen at the snap of a finger. The desired destination can be entered in several ways: per address, ZIP code, POI, degrees of longitude and latitude or by reloading of stored/recently found destinations. The map display can be adjusted to the individual driving situation by selecting between several map scales and views. The zoom function for crossings, intersections and traffic circles, but especially the 3D landscape or 3D city map renderings (with buildings, attractions, etc. in 3D) make navigation in any kind of traffic situation easy and also fun to operate.

iGO8 map views

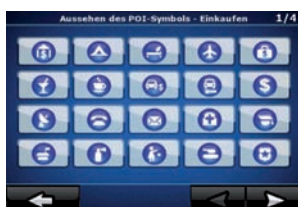

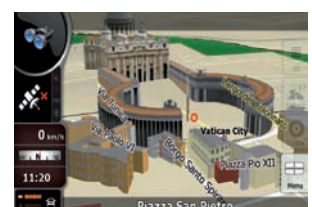

Automatic changeover between daytime/nighttime mode

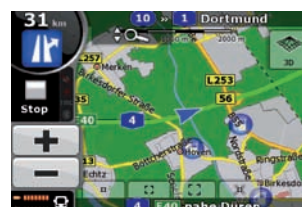

Route calculations according to various criteria

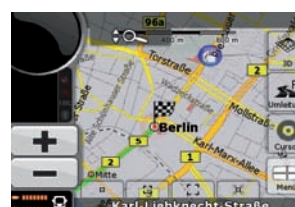

3D landscape or 3D citymap views with buildings, attractions, city maps

POI selection (points of interest) according to various criteria

Map views in 2D in various scales

Automatic smart zoom function for increasing the size of intersections/turn-off lanes

Easy and simple operation

All functions can be operated comfortably via touch screen: from the operation of the radio and the iPod through to the hands-free phone system and additional components for even more versatility, such as ZE-NA2000 or rear view camera.

Straightforward connections

The connection to the factory installed steering wheel remote control is no problem for E>GO: simply connect the ZE-MC2000 to the original wire harness of the car, turn it on and control your E>GO moniceiver over the steering wheel remote control.

ZE-MC2000 with ZE-NA2000

Automatic daytime/nighttime mode and the 3D map views simplify navigation.

Bluetooth A2DP

Integrated Bluetooth module with hands-free phone system function, A2DP for mobile phone music.

ZENEC's ZE-MC2000 is equipped with a high resolution 6.5" LCD panel and with touch screen controlled UI. The installed CD/DVD device plays all current A/V formats and ensures perfect audio and visual reproduction with its electronic and mechanical anti-shock system. In addition to the RDS tuner that has been perfected for best station reception in European countries, a digital 4x50 watt power amplifier, or the integrated Dolby Digital decoder, the

E>GO also features an integrated SD card reader, AUX line-in, USB port, and a full-feature Bluetooth module for hands-free calling and iPod direct interface (via media box). Additional ZENEC program components such as navigation, a DVBT tuner or a rear view camera can also be connected to the ZE-MC2000 and are like with the iPod or the hands-free phone system – operated comfortably via touch screen.

RDS Tuner
with automatic signal search, 30 channel storage ability (18 UKW/12 MW) and Best Station Memory

CD/DVD Player
plays CDs, CD-R/RW, MP3, WMA, DVD, DVD±R/RW, DVD-MP3, JPEG, Picture CD

iPod
iPod direct connection without any additional adapters, operated by touch screen (only audio)

USB
USB direct connection via connection box (included in the delivery), operated by touch screen

Navigation (optl.)
optional navigation system ZE-NA2000, operated by touch screen

Security code
intelligent theft protection with electrical supply monitoring, switchable via safety code

Bluetooth/A2DP
A2DP for mobile phone music, integrated Bluetooth module with hands-free phone system function

AV-input
two separate A/V inputs for the connection to other external A/V source devices such as video game systems, etc.

Camera
Rear view camera input, activated manually or automatically with backwards driving

SD card reader
integrated SD card reader for universal use, like audio and video files, pictures, etc.

Dual zone
separate A/V reproduction zones, subdivided in the front and rear – for example, DVD play in the rear

MPEG4/DivX6
plays all standard video formats such as VCD, SVCD, MPEG4 – extra also DivX6 files
