

How to update navigation software and maps on your ZE-NC524

Purpose:

Update of navigation software and maps after initial startup of a newly bought ZENEC device. First time update of map data is included at no extra costs.

Note:

The online update should be conducted **within 30 days after initial startup**, cause the device has marked this date and will remember it. Any update after this time period will be subject to a charge. Please read this guide entirely before you start the update procedure.

Mandatory prerequisites:

1. You need to get registered on **www.naviextras.com**.
Write down your username and password as you will subsequently need it to log on.
2. ZENEC device is properly installed, SD-card is inserted and has successfully been used to navigate (at least once).
3. Free of charge synchronizing toolbox has been downloaded from **https://zenec.naviextras.com/shop/portal/downloads** and has also been successfully installed.
4. Your PC has an active broadband internet connection with a download rate of at least 1 MBit/s.
5. PC features an SD- card reader and the ZENEC SD card, with the navigation software and the maps, has been inserted.

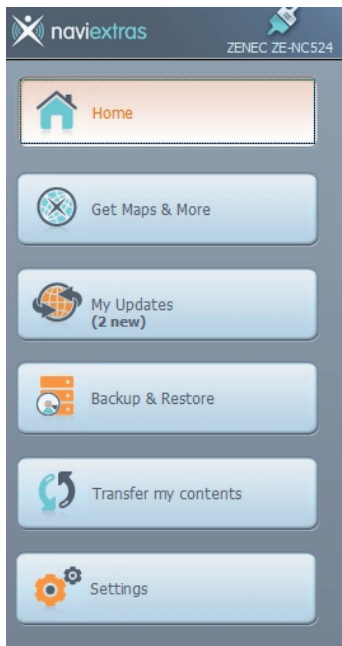

Optional prerequisites:

In case you would exactly like to know which map has been updated to which version, write down the version info of the map(s). To get it displayed tap on **Navi->Settings->About->Maps**.

Step by step:

1. Open Toolbox-Software.
2. Log on with your user access data.
3. Click „**My updates**“ .
4. Choose „**Install**“.
5. Now the program offers you to perform a backup. You should accept, cause the program is going to backup the entire card contents including the license key.
6. Follow the on-screen instructions to install the available updates.
7. Do not interrupt the download or installation process, otherwise you need to repeat the entire procedure. Duration of the update process will be something in between 15 minutes and (if unlucky) a couple of hours, depending on server load and transmission speed.
8. After finishing the installation, close the toolbox program. Remove the SD card and insert it into your ZENEC device.
9. Now you may check whether your update has been successful.
Tap on **Navi-> Settings -> About -> Maps** and browse through the available country maps. The relevant date of the respective map will be displayed on-screen.
Done.
